Matthew Mendoza **Math-45-Krauel-F20**

Assignment Math45-Homework-WEEK-10 due 11/07/2020 at 11:59pm PST

---

1. (1 point)

(1) Find a particular solution to the nonhomogeneous differential equation $y'' + 4y' + 4y = 8x^2 + 4x + 8$. (Note: it might be better to first do part (b) before part (a).)

$y_p =$ _____ help (formulas)

(2) Find the most general solution to the associated homogeneous differential equation. Use c_1 and c_2 in your answer to denote arbitrary constants, and enter them as c1 and c2.

$y_c =$ _____ help (formulas)

(3) Find the most general solution to the original nonhomogeneous differential equation. Use c_1 and c_2 in your answer to denote arbitrary constants.

$y =$ _____ help (formulas)

---

2. (1 point)

(1) Find a particular solution to the nonhomogeneous differential equation $y'' - y' = -5$. (Note: it might be better to first do part (b) before part (a).)

$y_p =$ _____ help (formulas)

(2) Find the most general solution to the associated homogeneous differential equation. Use c_1 and c_2 in your answer to denote arbitrary constants, and enter them as c1 and c2.

$y_c =$ _____ help (formulas)

(3) Find the most general solution to the original nonhomogeneous differential equation. Use c_1 and c_2 in your answer to denote arbitrary constants.

$y =$ _____ help (formulas)

---

3. (1 point) Solve the following differential equation by variation of parameters. Fully evaluate all integrals.

$$y'' + 9y = \sec(3x).$$

(1) Find the most general solution to the associated homogeneous differential equation. Use c_1 and c_2 in your answer to denote arbitrary constants, and enter them as c1 and c2.

$y_c =$ _____ help (formulas)

(2) Find a particular solution to the nonhomogeneous differential equation $y'' + 9y = \sec(3x)$.

$y_p =$ _____ help (formulas)

(3) Find the most general solution to the original nonhomogeneous differential equation. Use c_1 and c_2 in your answer to denote arbitrary constants.

$y =$

_____ help (formulas)

---

4. (1 point) Solve the following differential equation by variation of parameters. Fully evaluate all integrals.

$$y'' - 4y = xe^{2x}.$$

(1) Find the most general solution to the associated homogeneous differential equation. Use c_1 and c_2 in your answer to denote arbitrary constants, and enter them as c1 and c2.

$y_c =$ _____ help (formulas)

(2) Find a particular solution to the nonhomogeneous differential equation $y'' - 4y = xe^{2x}$.

$y_p =$ _____ help (formulas)

(3) Find the most general solution to the original nonhomogeneous differential equation. Use c_1 and c_2 in your answer to denote arbitrary constants.

$y =$

_____ help (formulas)
