

Expectation checklist - Module 11

At the completion of this module, you should:

- be able to use one solution of a second-order homogeneous linear differential equation to find another solution to the differential equation that is linearly independent.

This could be done in two ways:

- the method in the video, or
- using the given formula.

You will be assessed on your understanding of these concepts:

- within the homework,
- on the quizzes, and
- later, on the exam.

Coming up next, we:

- Actually solving a certain type of linear differential equation!
