

Floating point Representation :  $5 \cdot 375_{10}$

Step 1: Convert decimal to Binary

First we take integer part :  $5$

$$2 \overline{) 5} \quad \rightarrow \quad 1$$

4

1

$$2 \overline{) 2} \quad \rightarrow \quad 0$$

2

0

$$2 \overline{) 1} \quad \rightarrow \quad 1$$

$$5_{10} = 101_2$$

Now we take fraction :  $0 \cdot 375_{10}$

$$0 \cdot 375 \times 2 = 0 + 0 \cdot 75$$

$$0 \cdot 75 \times 2 = 1 + 0 \cdot 50$$

$$0 \cdot 50 \times 2 = 1 + 0 \cdot 00$$

$$0 \cdot 375_{10} = 0 \cdot 011_2$$

$$5 \cdot 375_{10} = 101 \cdot 011_2$$

Step 1:  $5 \cdot 375_{10} = 101.011_2$

Step 2: Converting Binary to Sci Notation:  $101.011_2$

Scientific <sup>Notation</sup> Review.

Convert  $631.65_{10}$

$631.65_{10} \xrightarrow[\text{Notation}]{\text{scientific}} 6.3165 \times 10^2$

Convert Binary to Scientific Notation of  
 $101.011_2$

$1.01.011_2 \xrightarrow[\text{Notation}]{\text{scientific}}$   $1.01011 \times 2^2$

Scientific Conversion of  $101.011 \times 2^2$  is

$1.01011 \times 2^2$

Step 2: Scientific Notation Conversion :  $1.01011 \times 2^{10}$   
 $1.01011 \times 2^2$

Step 3: Add Biased Exponent

$$\text{Biased offset} = 7$$

$$1.01011 \times 2^{2+7} = 1.01011 \times 2^9$$

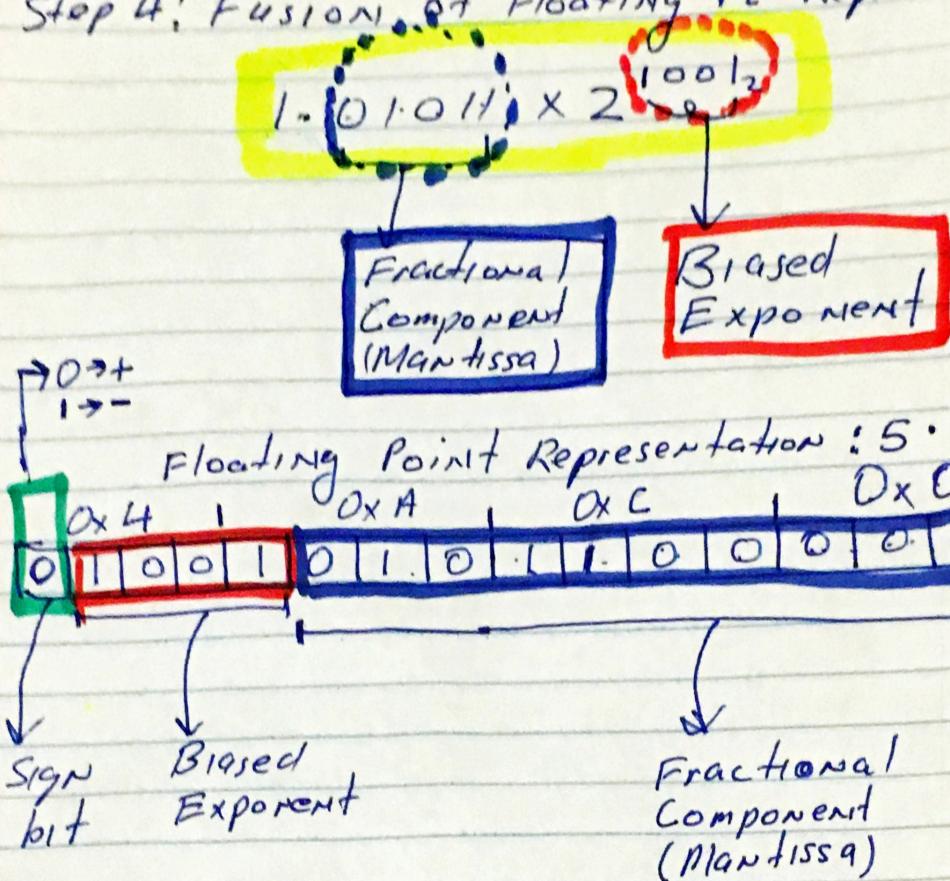

$$= 1.01011 \times 2^{1001_2}$$

$$q_{10} = 1001_2$$

Step 2: Scientific Notation :  $+1.01011 \times 2^2$

Step 3: Biased Exponent =  $9_{10} = 1001_2$

Step 4: Fusion of Floating Pt Representation.

Step 5: Convert to Hex :  $5 \cdot 375_{10}$

0x 4AC0

$$K = 2^{N-1} - 1 = 2^{4-1} - 1 = 2^3 - 1 = 8 - 1 = 7$$

$N$  = # of bits Used to store Biased offset
